Tokenization is the process of issuing digital representation of an asset on a blockchain.

Tokenization is potentially a big deal.
Industry experts have forecast up to 5\$ trillion
in tokenized digital-securities trade volume by
2030.

Transform the structure of financial services and capital markets by letting asset holders reap the benefits of blockchain.

24/7 operations

Data availability

faster transaction settlement

Higher degree of automation

Four typical steps involves in asset tokenization:

Asset sourcing

Digital asset issuance and custody

Distribution and trading

Asset servicing and data reconciliation
